HealthX

HealthX is a 24 hour cross disciplinary hackathon, where students use technology in order to create innovative solutions to real world problems occurring in life science and medicine.

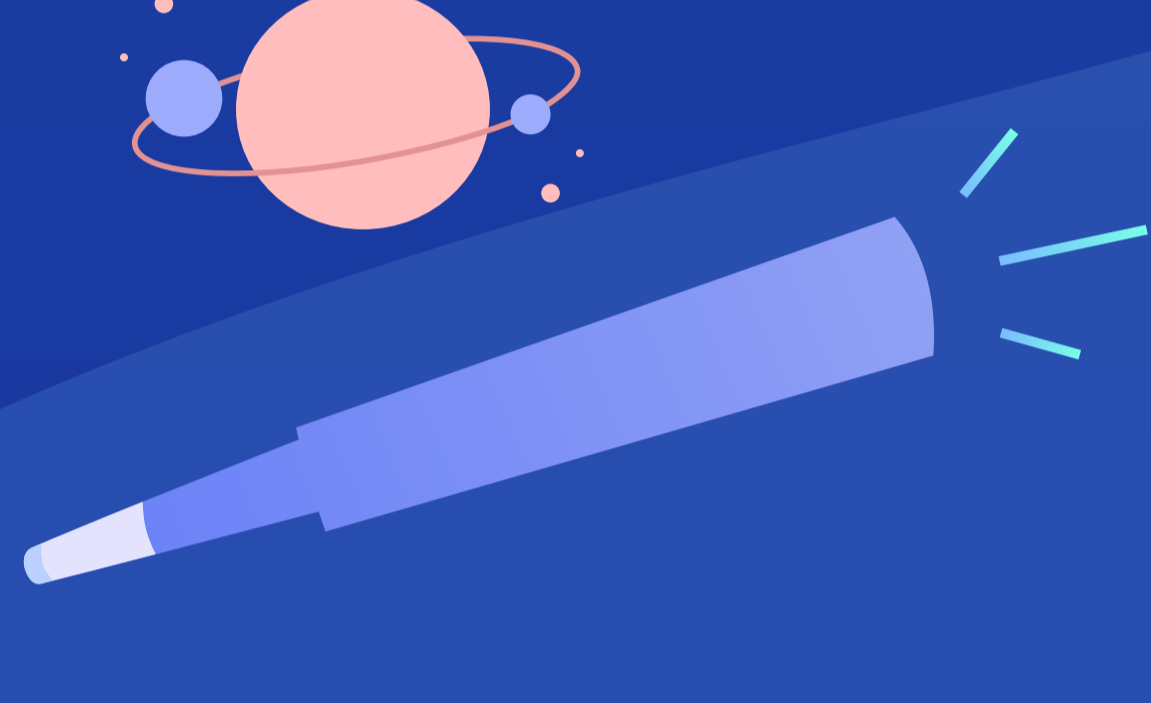

Main Values

HealthX is a chance for students interested in life sciences and technology to collaborate and tackle problems in the medicine and biology field.

It was established according to our 2 main values:

Collaboration Between Streams

Are you an expert in neuroscience but have never touched a line of code? Perhaps you can spin up a website, but you've never heard of a mitochondria (THE POWERHOUSE OF THE CELL)? Working in diverse teams is one of the best ways to come up with unique solutions, and we encourage teams to have a blend of both technical and life science skills.

Exploring New Limits

HealthX is all about pushing the boundaries of what is known and unknown in the fields of medicine and life sciences. If you have an idea that you think could revolutionize the way medical research is done, or a solution that could benefit those with illnesses or disabilities, then this is the hackathon for you.

FAQ

General

- What is a hackathon?
- How much does it cost?
- When is the application deadline?
- Do I need to know how to code? What if I've never taken a bio course?

Teams & Projects

- How big can my team be?
- What happens if I don't have a team?
